

Second International Scientific-Practical Seminar
Possibilities of Actualization of Human Mental Resources, October 5-6, Riga, Latvia

Pr Philippe Oliviero, Sorbonne Paris Cité, René Descartes

- Assistant Professor in Psychology, Université Sorbonne Paris Cité, France.
- Associate Researcher at the Unité de Recherche en Sciences Humaines et Sociales,
Institut de Cancérologie Gustave Roussy (France).

Title of the communication:

**FOR A COGNITIVE ONTOLOGY OF MODES
OF EXISTENCE OF PSYCHIC RESOURCES**

The three ontological and epistemological worlds.

(adapted from Plato to Frege, Russel, Popper, Ecclès, et Habermas)

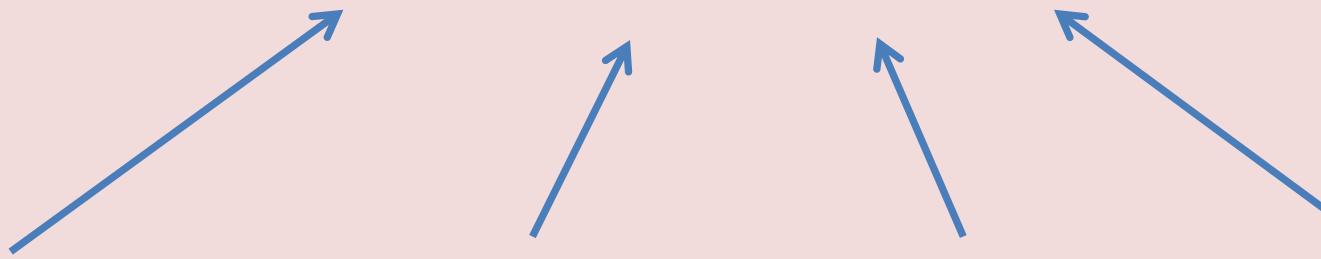

Types of worlds	World 1	World 2	World 3
States studied	States of matter and energy	Mental states	Semiotic states Langages
World's Taxinomies	World of things	World of states of consciousness	World of knowledges, sciences, languages, beliefs,
Scientific Disciplines	Physic, Chemistry, Biology, neurology,	Psychology	Anthropology, Sociology, Economy, Political Sciences
Types of structures	Structures of the world Internal Order	Structures of psychological process	Semiological structures of signs and languages
Type of discourses	Theoretical, scientific	Criticism, aesthetical	practical-moral, ethical
Types of languages	Natural languages Clue,	Language of the thought, « Mentalese » (J.Fodor)	Natural languages, scientific languages, formal languages (World 4) (Logic and mathematic)
Psychologies and Linguistic Persons	Universality Third person	Singularity First person	Particularity Second person
Experience nature	Object of the experience	Experience of the object	Experience of Semiology
Validity criteria	efficacy	authenticity	legitimacy
Acts of language	Facts, observations	Expression, evaluation	Norm, prescription,
Ambition to truth	Accuracy True/False	Sincerity	accuracy good/bad

The four constituents of the field of study of psychic resources

Causes of a resource realization

Example: the experience of a « dreaming » resource

Each dimension possesses a differential weight in the process

Positions

Cultural, economical,
Social historical

The capitals: (Pierre Bourdieu)
-Economical
-Cultural
-Relational

Personal dispositions

« Bio-Psy-Soc »

Psychic resources

- Availability
- Reliability (weaknesses)
- Expectation
- Instrumentality
- Values (usage, exchange, etc.)
- Adaptability (coping)
- Theory
- (Meta) Representations (cognitive, metacognitive, Th. Of Mind,
- W3 in W2 : social representations, cultural, historical, of psychic resources.

Contexts

environmental
pragmatic

Entity properties on which the resource operates

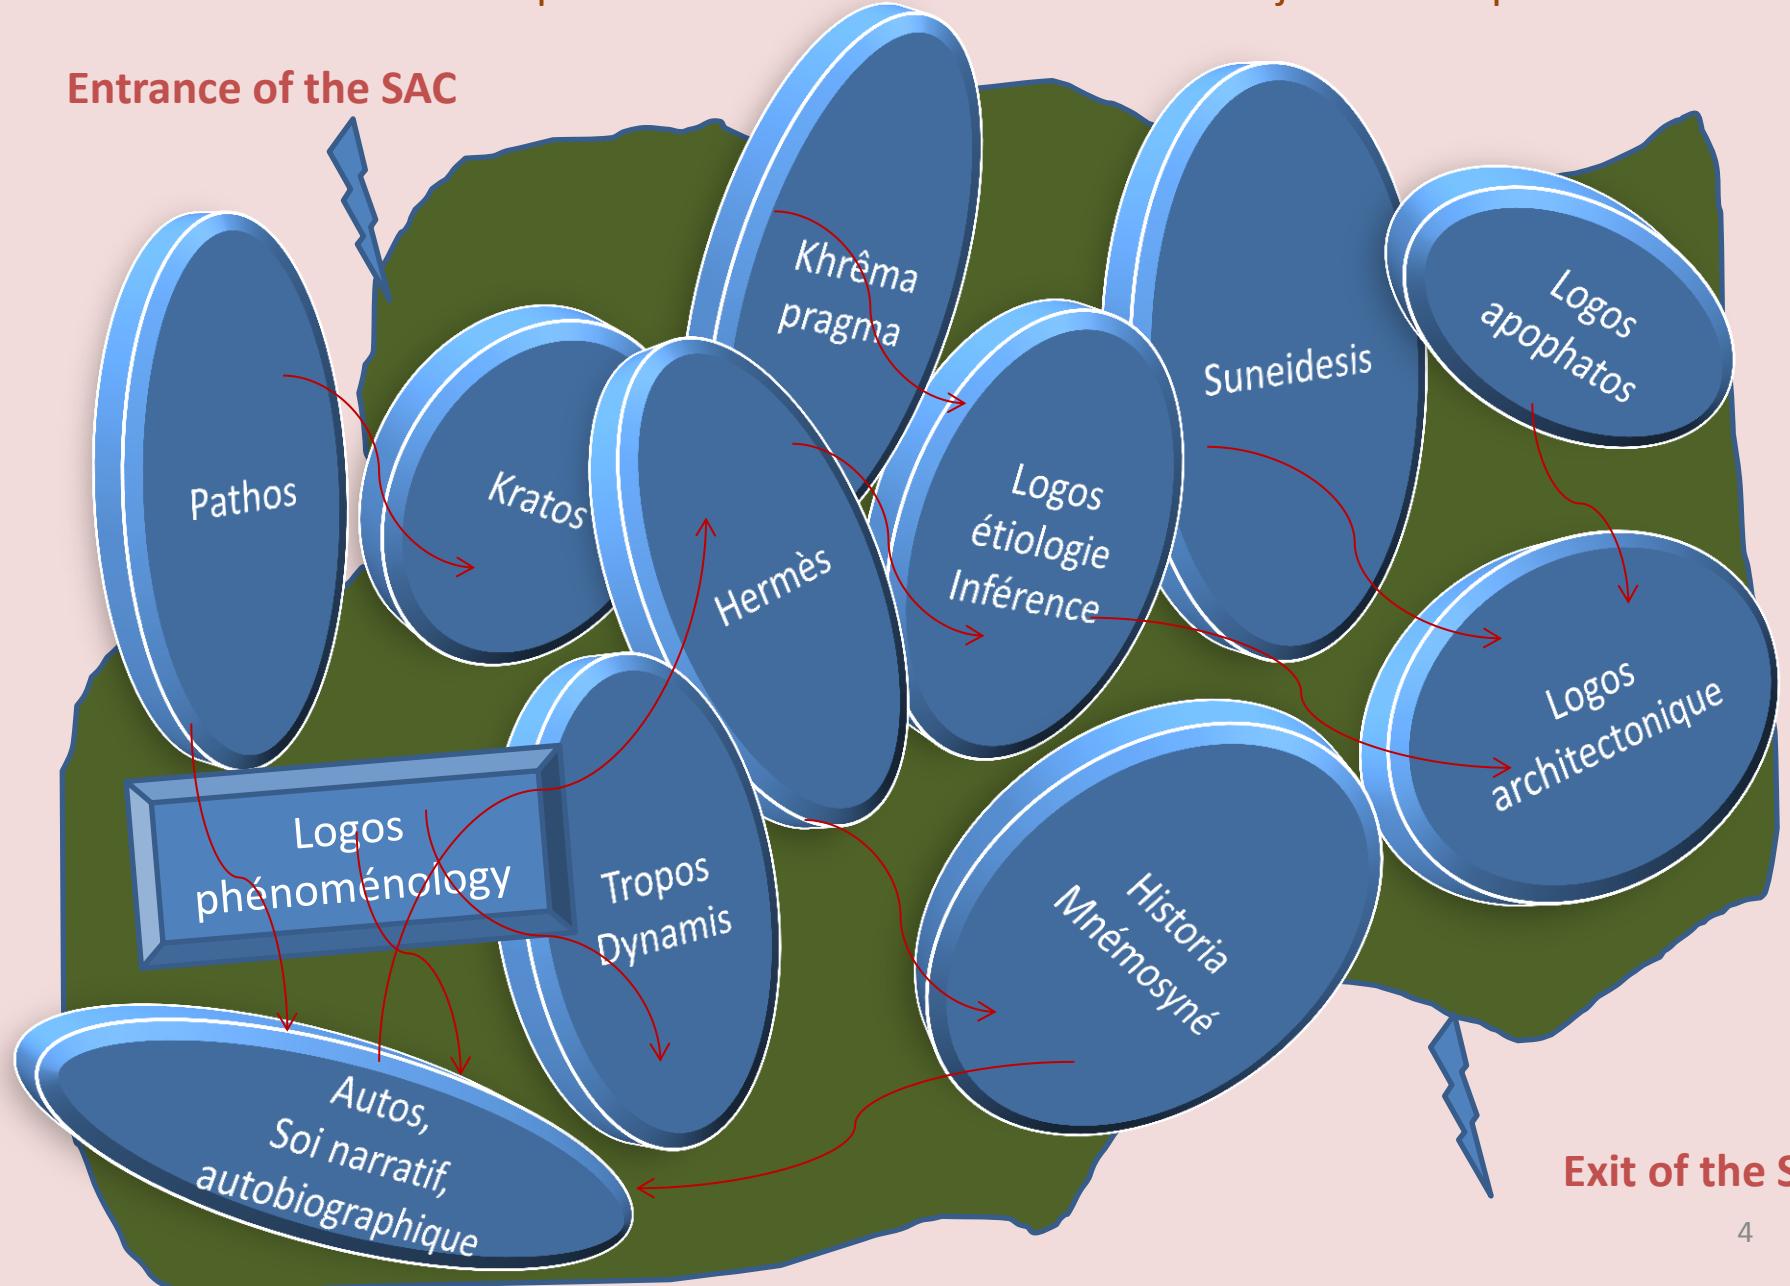

The three worlds

- Primary properties
- Second properties (Meyerson, 1983)

11 factors and 60 facets = !11 Arrangements of architectural background

!11 possible relations between the 11 subjectivation primitives

Entrance of the SAC

The Universal Model of subjectivation : a model with 11 primitives (factors or categories)

➤ A

subjectivation

resource

B (general model)

Resources of subjectivation

Source
A
Judging entity

- Pathos +
- Kratos
- Dynamis
- Tropos
- Logos I: Phenomemality
- Logos II: etiology, causality
- Logos III. Architectonic
- Logos IV. Apophatism
- Hermès
- Historia, Mnemosyné
- Suneidésis (Consciousness)
- Autos (Self)

judgments dimensionality

D= 0 : scalar = judgement = 1 predicate

D= 1 : vector = predicate / bipolar dimension

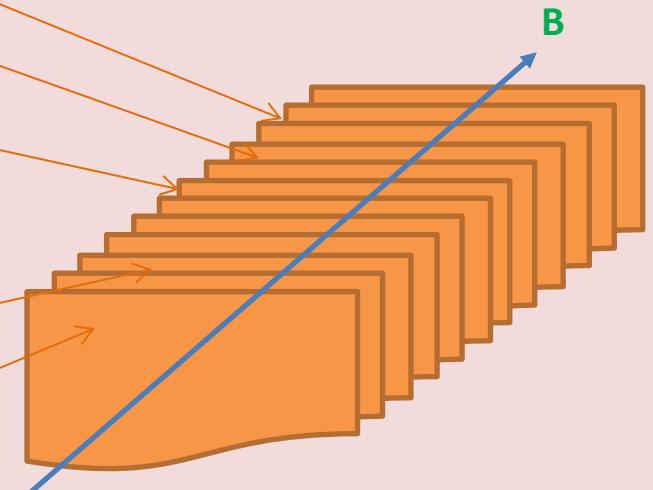

D= 2 : matrix = set of predicates on a set of dimensions

D= 3: tensors = set of predicates on a set of matrices

Target

B

judged entity

A Subjectivation of B by A =

A's representation of B on the model dimensions

The referential 11 entity subjectivation 's modes

Dynamis, Tropos +

Attraction, attirance

ethos, praxis, fonctionnements : **Pragma +**

Utilité, efficience, habileté, compatibilités **Khrêmata +**

unité, unicité, monisme : **Architectonique +**

attention, conscience : **Suneidesis +**

substance, structure : **Autos +**

Logos +,

cohérence, crédibilité, confiance :
intelligence (cata et apophasis),

philie (homo/hétéro), **Pathos +**

Historia, Mnemosyné -

oublis, déformations

impuissance, indécision, retrait : **Kratos -**

inexpressivité, passivité, soumission, timidité
incontrôlable, irresponsabilité, aboulie

(H1-H10) sociabilité uniplexe : **Hermès -**

impersonnelle, distale, groupale

Hermès + : proximale, singularisées, soutien,
aide, confiance

Kratos +: puissance, contrôle, énergie,
décision, cohérence, hiérarchie, directivité
autorité, activité, dominance, assertivité
énergie, créativité, responsabilité

Historia, Mnemosyné +:
mémorable, racontabilité

Pathos - : phobie (homo/hétéro)
hostilité, a-pathie antipathie,

Logos - : inintelligence, défiance,
incohérence, fermeture, inattention

Autos - relation, agrégat,

Asuneidesis - (inconscience)
refoulement, oubli négligence, ignorance

Architectonique- : pluralisme,incohérence

Pragma - : incompatibilités, incapacités
Khrêmata - inutilités

Dynamis, Tropos -

Retrait, répulsion

Entity subjectivation equation

Computation of the subjectiving power (PS) of an entity A for an entity B

Definition: The subjectiving power (PS) of an entity A for an entity A or B is equal to the sum of the resources attributed over the 11 factors and 60 facets of possible subjectivations

- Multidimensional computations (matrices, vectors, tensors).
- $PS = \text{Pathos} (\text{coef. Pathos1} + \text{coef. Pathos 2} \dots) + \text{Kratos} (\text{coef. Kratos 1} + \text{coef. Kratos 2}) + \text{Logos I} \dots \text{Logos II} \dots + \text{Autos.}$
- An entity is subjectived if the targeted entity is informed of at least one of the 11 factors of subjectivation.
- If no psychic resource is attributed to an entity, this entity has no existence for the subjectiving entity.

A $PS = 0$ means a non-subjectivation or a total desubjectivation of the entity.

For ex. The kaivalya, the ultimate state of the Yoga Sutra of Patanjali,
The nirvana in buddhism (S free = non-identification to aggregates, skanda).

Cognitive Ontology: referential, cognitive, metacognitive and theoretical levels

Metatheoretical level (theory of theories or of everything)

One langage to talk about **The snow is white**

Theoretical levels : epistemic or doxic

The snow is white because... **Snow ir balts , jo**

Metarepresentational level

(metacognitive level (ego/ego) or theory of mind (alter for ego))

I think (I believe, I wish, etc.) that the snow is white **Es domāju, ka sniegs ir balts**

Cognitive level

The snow is white **Sniegs ir balts**

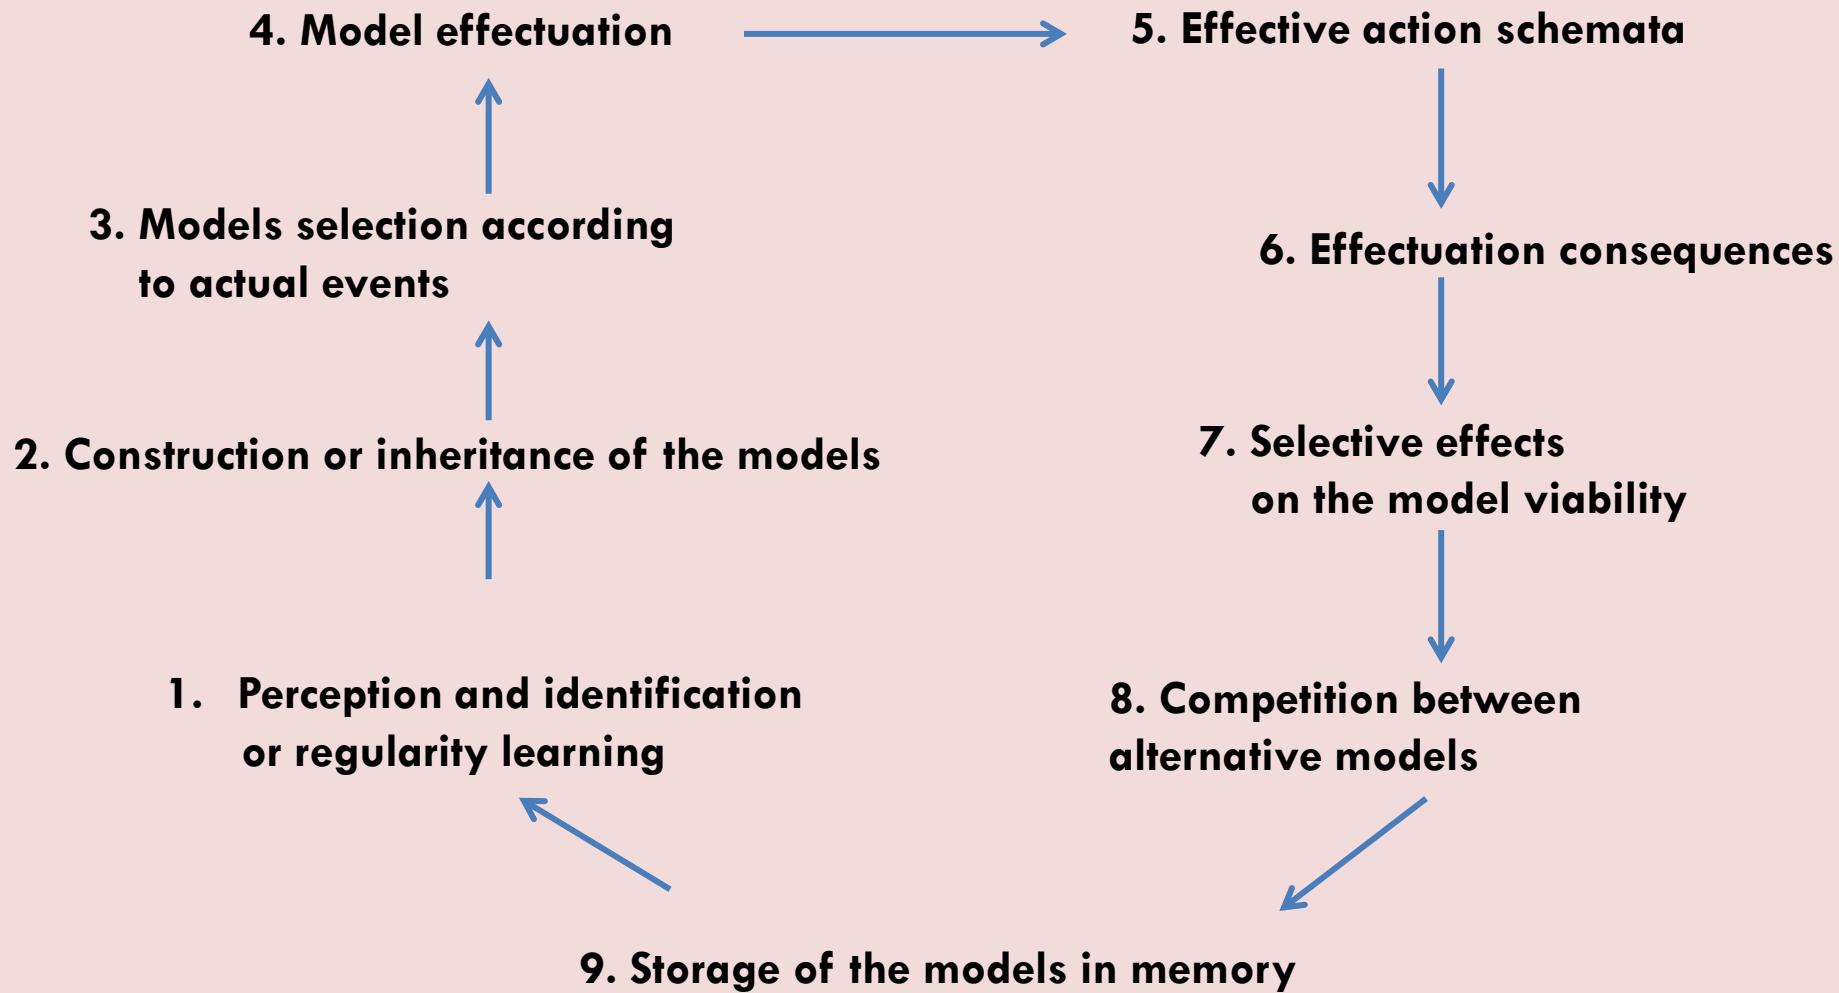

« there is »

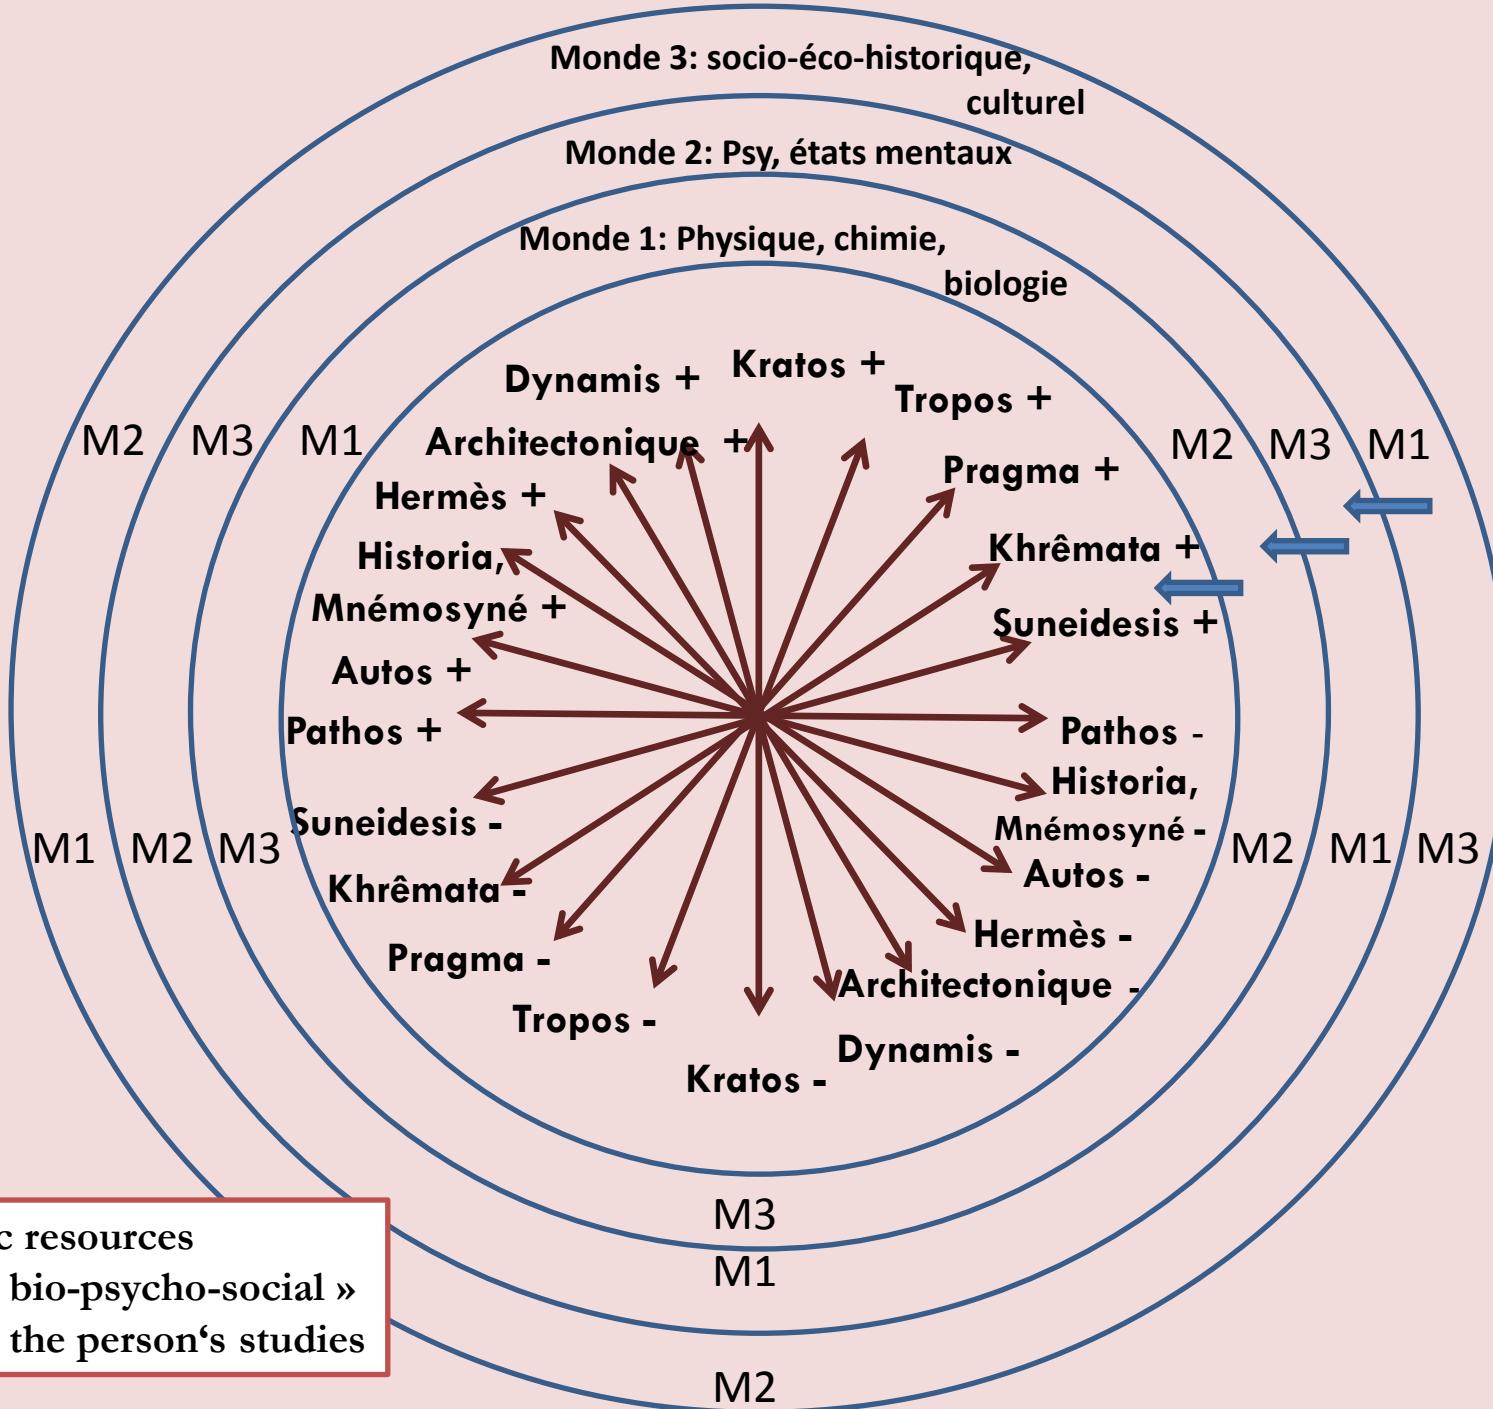

Actual level, extra-symbolic referential level

White snow **Sniegbalīte**

Entity model subjectivation process

according to Complex Adaptive Systems (adapted : Murray Gell-Mann, 1995).

11 psychic resources
and the « bio-psychosocial »
model of the person's studies

*Une petite neige blanche est tombée,
Blanche comme la plus fine farine,
Une petite neige blanche est tombée,
La terre de tiédeur elle câline.*

daina traditionnel letton

A small white snow fell,
White as the finest flour,
A small white snow fell,
The land of warmth she cuddles

*Mazs balts sniegs krita ,
White kā finest miltiem ,
Balts Nedaudz sniega krita ,
Zemi viņas cuddly siltumu .*

Tradicionālā Latvijas Daina

Second International Scientific-Practical Seminar

Pr Philippe Oliviero, Sorbonne, Paris

The Stoic Psyché

Autos= Suneidesis = Physis = Logos

“What is primitively specific (*oikeion*) to the human living is its own constitution (*sustasin*) and his consciousness of having it (*suneisdesin*) as it is not likely that nature makes human living a foreigner for himself”.

Chrysippe, « Des fins », Diogène Laërce, VII, 85.

The romantic psyché: how to be nowhere ?

« Je touche mon horizon de tous les côtés ».

(I reach my horizon on all sides).

Théophile Gautier,
Mademoiselle de Maupin [1834],
Paris, Gallimard, 1973, p 84.

Caspar David Friedrich (1817-1818)
The Wanderer Above the sea of clouds,
(Kunsthalle de Hambourg).

The « Letton Pirts » experience

Now, to conclude my speech, I ask only one last question to the participants :

What is it like to roll in the snow at minus ten degrees Celsius ?

Which subjectivation factors or psychic resources are activated about this white snow ?

In others words, what is your “white snow”?

There is only one solution : to try it !

« Kas to teica, tas meloja, Ka saulīte nakti guļ ; Vai saulīte tur uzlēca, Kur vakaru norietēj' ? »

« Quiconque l'a dit, a menti, que le Soleil va se coucher la nuit ; le Soleil se lève-t-il, où il s'est couché hier ? »
